

## Press release

### **electronicVED: launch of the next generation of the top-rated product from Vaillant**

- **A new display that is even easier to read**
- **Built-in energyMONITOR for fully transparent consumption figures**
- **Output increased from seven to eight litres per minute**

**Frankfurt am Main / Remscheid, 12 March 2019** – With a new range of instantaneous electric water heaters, Vaillant unveils the next generation of its top-rated product at the ISH 2019 in Frankfurt am Main. Based on its successful electronics and control technology, the company has revamped its instantaneous electric water heater, which was given the seal of approval of consumer organisation Stiftung Warentest. The available volume of hot water has been increased from seven to eight litres per minute – at a hot-water temperature of 55 °C – across all models. Thanks to the Temptronic output and water volume regulation system, the fully electronic model **electronicVED exclusive** even supplies 10 to 16 litres per minute. What's more, all models have been given a new design.

The top-of-the-range models **electronicVED exclusive** and **electronicVED plus** have been fitted with a new display that is even easier to read, not to mention the built-in **energyMONITOR**. This Vaillant innovation makes it possible to display electricity and water consumption in kW and m<sup>3</sup> for the previous 30- or 360-day period on the display or, in the case of the **electronicVED exclusive**, the remote control provided. Government subsidies of 100 euros are available if replacing a hydraulic or older instantaneous electronic water heater with the **electronicVED exclusive**.

The new basic model **electronicVED** now features a display to enable user-friendly adjustment and management of the water temperature. On the **electronicVED pro**, users can choose between water temperatures of 35, 45 and 55 °C simply by using the three-step switch.

The electronicVED and the electronicVED exclusive models took first place in the most recent Stiftung Warentest product comparison, which was held four years ago. The organisation rated the Vaillant appliances as “very good” or “good” in the categories of hot-water convenience, operation and safety. “These ratings spurred us on to enhance our instantaneous electric water heaters even further,” explains Sebastian Albert, Head of Product and Service Management at Vaillant Germany.
